

THREE-PHASE TRANSFORMERS FOR PORT CONNECTIONS 6.6 - 11 Kv ENCAPSULATED

IEC 60076-11

IEC/ISO/IEEE 80005-1

These transformers have been designed to meet the connection needs of ships in ports in accordance with the IEC/ISO/IEEE 80005-1 standard.

They are carefully manufactured to ensure long-term reliability and protection from the special working conditions found on ships, such as vibrations, humidity, etc.

The high-voltage (HV) coils are encapsulated with epoxy resin. The low-voltage (LV) coils are vacuum-pressure impregnated (VPI).

The equipment for Europe complies with the European ECO-DESIGN-2 standard.
